

Memo to Tier 1 & Tier 2 Suppliers

2 sided vinyl tape placement issues are now history

For immediate release

Dresden, Ontario Canada April 28, 2006

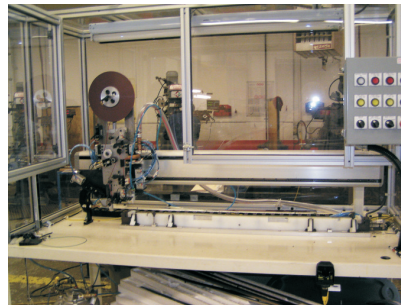

M.P.T. Inc, a global leader of custom engineered automation solutions, has introduced the ErgoTaper line of 2 sided tape assembly cells.

According to Mark Parsons, President of M.P.T. Inc. "OEMs are designing new models with more diverse trim requirements. Coupled with Just in Time delivery contracts, Tier suppliers are faced with the task of meeting these tighter specifications and still making a profit".

ErgoTaper solutions eliminate the guesswork and product variation while at the same time saving valuable factory space. Depending on the model, each unit can handle the workload which previously required 2 or 3 workstations. Parts assembly that require a high level of manual dexterity are a snap with ErgoTaper. This, of course, reduces scrapage which yields lower overall unit costs and maximizes production.

Assembly lines utilizing ErgoTaper cells allow Program Managers and Sales Engineers to more accurately calculate inhouse costs before bidding on new model parts business.

"Like all our custom products, ErgoTapers are backed by our Industry Leading 3 year warranty" according to M.P.T. Inc. Vice President Mike Pearson.

ErgoTaper - The 1 stop tape placement solution

Dual Action ErgoTaper

Applying tape for OEM liner removal and adhesion promoter applied where required

- 1) Tension unwinding from a planetary or level woundcoil with sacrificial liner removed
- 2) Installs tape onto product geometry ready for tabbing

The Dual Action ErgoTaper accurately places and installs 2 sided tape in a single assembly cell. It eliminates manual separation of the tape from the backing and errors associated with misalignment of the tape on the part.

Triple Action ErgoTaper

Applying tape and immediately removing liner for internal processing

All the Dual Action ErgoTaper features
Plus:
 Removes liner immediately for further immediate processing and wet out tape

The Triple Action ErgoTaper eliminates multi stations setups. In addition to performing all the Dual Action model steps; the Triple Action ErgoTaper also releases the tape backing on the second side.

The need for 2 workstations is eliminated. In addition, since no time is required for partial cure before releasing the second backing, the need for the intermediate part storage area is also eliminated.

Custom cell load and unload material handling options are also available

ErgoTaper solutions ensure a fast payback and are backed by MPT's industry leading 3 year warranty.
