

Considering Robots?

A robot application may be a more affordable solution than you think. Any robot application will include an End Effector to connect to your part and safety control to protect the operator. The complexity and scale of the project contain many variables that can affect the cost. Here are some budgetary costs with basic end effector and typical engineering and programming for your reference.

Small Job?

A small table top robot with 3kg payload, 24" reach and end effector could start around \$35k

Need Clearance?

We can help overcome obstacles.

Heavy Job?

For those Heavy parts with 20 kg payload, 1.85 m reach a unit will cost.....
\$56,000.
